

Listing of Claims:

This listing of claims reflects all claim amendments and replaces all prior versions, and listings, of claims in the application. Material to be inserted is in **bold and underline**, and material to be deleted is in ~~strikeout~~ or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets [[]].

1. (Currently amended) A toy comprising:

a first component in the form of a first portion of a vehicle;

a second component **in the form of a second portion of a vehicle;**

a magnetic portion affixed to one of the first component and the second component, wherein the magnetic portion is adapted to magnetically couple to the other of the first component and the second component; ~~and~~

an alignment assembly spaced away from the magnetic portion and adapted to align the first and second components to a predetermined position relative to one another, wherein the alignment assembly includes a post that protrudes from one of the first and second components and an aperture in the other of the first and second components; **and**

a third component supported between the first and second components and configured to rotate relative to the first and second components.

2. (Original) The toy of claim 1, wherein the first component includes a ferrous material.

3. (Original) The toy of claim 1, wherein the toy further includes at least a third component adapted to represent a second portion of a vehicle.

4. (Original) The toy of claim 3, wherein the second portion of the vehicle is one of a spoiler, a sideguard, a grill, a muffler, and a light.

5-6. (Cancelled)

7. (Original) The toy of claim 1, wherein the toy further includes a rotatable element.

8. (Original) The toy of claim 7, wherein the toy includes at least two components adapted to selectively couple with one another such that the rotatable element is confined therebetween.

9. (Original) The toy of claim 8, further comprising at least one support configured to restrict translation of the rotatable element.

10. (Original) The toy of claim 7, wherein the rotatable element is the second component.

11. (Currently amended) A toy comprising:

a plurality of components including:

a first component adapted to rotate and support at least one wheel; and

a second component and a third component adapted to magnetically couple with one another and operatively retain the first component between the second and third components, wherein the first component is magnetically coupled to at least one of the second and third components via a magnetic portion that extends from the at least one of the second and third components in a direction substantially perpendicular ~~non-parallel~~ to an axis of rotation of the first component.

12. (Cancelled)

13. (Original) The toy of claim 11, wherein at least one of the second and third components has at least one support configured to restrict translation of the first component.

14. (Original) The toy of claim 11, wherein at least one of the plurality of components is adapted to represent a portion of a vehicle.

15. (Original) The toy of claim 11, further comprising an alignment assembly adapted to align at least two of the plurality of components relative to one another.

16. (Cancelled)

17. (Previously presented) The toy of claim 11, wherein at least one of the plurality of components includes a ferrous material.

18. (Currently amended) A toy vehicle comprising:

a first component in the form of a first portion of a vehicle;

a second component in the form of a second portion of a vehicle;

a third rotatable component positioned between a portion of the first and second components, wherein the first component may be selectively magnetically coupled ~~attached~~ to the second component, thereby securing the third component in a rotatable configuration between the first and second components, and the third rotatable component represents a wheel and axle assembly; and

at least one support mounted to one of the first and second components and adapted to restrict translation of the third rotatable component, wherein the at least one support is a plate adapted to support the third rotatable component a distance away from the first and second components.

19. (Cancelled)

20. (Previously presented) The toy vehicle of claim 18, wherein the plate has at least one groove adapted to receive the third rotatable component.

21. (Previously presented) The toy of claim 14, wherein the at least one of the plurality of components is one of a spoiler, a sideguard, a grill, a muffler, and a light.

22. (Previously presented) The toy of claim 15, wherein the alignment assembly includes a post that protrudes from one of the plurality of components and an aperture in another of the plurality of components.

23. (Previously presented) The toy vehicle of claim 18, further comprising an alignment assembly adapted to align the first and second components relative to one another.

24. (Previously presented) The toy vehicle of claim 23, wherein the alignment assembly includes a post that protrudes from one of the first and second components and an aperture in the other of the first and second components.

25. (Previously presented) The toy of claim 3, wherein the third component is adapted to at least partially extend through an aperture in the first component.

26. (New) A toy vehicle comprising:

a vehicle body;

a cockpit adapted to couple to the vehicle body and having a magnetic portion positioned between a pair of axle supports;

an alignment assembly configured to align the cockpit with the vehicle body;

an axle configured to support one or more wheels; and

a chassis adapted to retain the axle within the axle supports.

27. (New) The toy vehicle of claim 26, further comprising a plurality of accessories adapted to magnetically couple to one of the vehicle body, the cockpit, the axle, and the chassis.

28. (New) The toy vehicle of claim 27, wherein the plurality of accessories includes at least one of a spoiler, a sideguard, a wheel, a grill, a muffler, and a light.

29. (New) The toy vehicle of claim 26, wherein the alignment assembly includes a post that protrudes from one of the cockpit and the vehicle body and an aperture in the other of the cockpit and the vehicle body.
